WEXFORD AUTHOR FINDS LINK BETWEEN MIND, SPIRIT IN NEW RELIGIOUS BOOK

[June 28, 2016](#) | [Norie Libradilla](#) | [Leave a comment](#)

WEXFORD, Pa. — This week marks the nationwide release of Dr. Paul Nussbaum's informative, new book, "What is the Purpose of My Brain?: Spiritual Healing and Salvation."

The human brain is the single greatest, most magnificent system ever designed in the history of the universe, and it sits right between the ears. Having spent nearly 15 years teaching the general public about the miracle of the human brain, author Nussbaum asks his readers: What is the Purpose of My Brain?

It is certainly true that if individuals learned that their brains were limited to providing them the ability to think, to move, to relate and to emote, then they could all rest with amazement. In this book, however, Nussbaum takes the extraordinary step of exploring an even more grand purpose. Perhaps God granted people a brain so that, in his image, they could not only commune with him and his son Jesus Christ, but have the ability to believe, to express their faith and to ultimately live their lives according to the teachings of Jesus Christ. Learn more about Nussbaum's thoughts on the grand purpose of one's brain and how the gift of the Holy Spirit is a path to one's spiritual healing and salvation.

Published by Tate Publishing and Enterprises, the book is available through bookstores nationwide, from the publisher at www.tatepublishing.com/bookstore, or by visiting barnesandnoble.com or amazon.com.

Nussbaum is a clinical neuropsychologist and an adjunct professor of neurological surgery at the University of Pittsburgh School of Medicine. The author has spent the past 15 years educating the general public about the miracle of the human brain and how to shape it for health across the entire lifespan, which can be accessed through www.brainhealthctr.com.

Nussbaum's work provides ideas on the important role the human brain may play in a person's spiritual health and in his or her ability to both feel and share the greatest medicines of all: love, forgiveness, kindness, faith, humility and hope. His call is to bring the teachings of Jesus to everyone regardless of background, to raise a call to action

to all clinicians and to explain a most grand purpose for our having a brain.
